STRONGER

KEVLAR

90lb Pull-Strength

Tests are performed on certified testing equipment that measures electronic current through wires until breaking point.

Standard resin lines usually range between 7-30lb pull-strength.

A photograph of two men, Mads Staerke and Jesper Martini, sitting on red stone steps outdoors. Mads is on the left, wearing a blue polo shirt and a black watch. Jesper is on the right, wearing a blue button-down shirt. They are both smiling at the camera. The background features a wooden lattice fence and green foliage.

A strong partnership is very important to us. We worked together for 9 years before we founded N-ear, and our partnership is based on credibility, dedication and professionalism.

MADS STAERKE
Founder of N-Ear

We believe that creating a great communications experience requires quality products and insight in the essential need of the customer.

AVAILABLE EAR TIPS

Premium ear tips with different forms, functions, and sizes:

Open Tips – Full Ambiance – Full Situational Awareness

Tulip Tips – Medium Ambiance – Medium Situational Awareness

Double Flange Tips – Low Ambiance – More Radio Sound Less Situational Awareness

Patented Ear Wax Filters

The Patented Ear Wax Filters are a tool designed to change the white speaker filters in the N-ear 360 earpiece.

Only under extreme circumstances should the speaker filter get clogged with dirt and affect the performance of the N-ear 360 earpiece. The Ear Wax Filters are available in packs of 8 units, which, when used properly under normal conditions, will easily last for the lifespan of your 360 earpiece.

ACCESSORIES

Adaptors

We have multiple ways to connect your N-ear Earpiece to speaker mics, SnapLock Base PTT, and even to your existing earpiece system. So whether you get a 3.5mm N-ear Earpiece or the SnapLock, you can easily adapt to your specific requirements and gear.

Cable Replacement Options

Each cable for the N-ear 360 earpiece can be separated from the earpiece. Replacement cables are available for purchase.
